Applied-AI engineer who ships LLM products solo and puts agentic workflows into real use — Claude API, RAG, and agentic data pipelines. Two AI products live in production, plus agentic consumer-analytics tooling on Coca-Cola's Global Human Insights team.

EXPERIENCE

The Coca-Cola Company

May 2026 – Present

Global Human Insights Intern, Ignite Program

Atlanta, GA

- Built and deployed an end-to-end analytics agent (Python, SQL/SSMS, LLM intent parsing) that automates structured analytical workflows across enterprise consumer datasets spanning international markets at ~25–30M-row production scale.
- Designed a deterministic calculation engine enforcing strict metric contracts and aggregation rules for reproducible outputs across Consumption, Equity, and Occasions datasets, aligned to enterprise data-governance standards.
- Scaled the system from highly aggregated data (~23 brands, US/CA, DuckDB prototype) to querying backend consumption data via SQL Server, defining data requirements and driving cross-functional ingestion and validation.
- Resolved cross-system inconsistencies across Excel, Power BI, and the Python engine with validation frameworks, guardrails, and aggregation-logic alignment, improving reliability through structured testing, edge-case handling, and fail-loud enforcement.

Quadcore Innovations

Oct 2025 – May 2026

Operations Improvement Analyst — Nuf Cash fintech platform

- Automated recurring SQL and Power BI pipelines, eliminating manual data pulls and surfacing operational bottlenecks through root-cause analysis.

PROJECTS

SyllabusAI · syllabusai.net

Mar 2026 – Present

- LLM parsing that converts unstructured syllabi (PDF or text) into structured, schema-validated records at 95%+ accuracy across 2,500+ syllabi; Claude API with SSE streaming, Node.js + Supabase, 500 active users.
- Built a RAG pipeline over parsed data: embedded course content with Voyage AI, indexed it in Postgres/pgvector, and used semantic retrieval to ground Claude answers to student questions.

AutoAppli · autoappli.com

Apr 2026 – Present

- Full-stack LLM product (Next.js + TypeScript, FastAPI, Supabase, Claude API) that tailors resumes and tracks applications; built cross-source deduplication with data-quality checks over 3,000+ sightings across 7+ feeds behind a feature flag.

Jacobs' Pharmacy 3D Recreation · procedural Python

2026

- Drove 3D geometry programmatically with procedural Python and agentic asset-generation tooling to reconstruct the 1886 Coca-Cola origin site; internship capstone.

TECHNICAL SKILLS

AI & LLM: LLM application development, agentic workflows & agent development, RAG, semantic retrieval, embeddings & vector databases (pgvector, Voyage AI), prompt engineering, LLM-based data cleaning & extraction, SSE streaming, Claude API, Copilot

Data & Pipelines: Python, SQL, ETL, schema design, data-quality checks, DuckDB, PostgreSQL, NielsenIQ

Web & Tools: TypeScript, Next.js, Node.js, FastAPI, React, Supabase, Vercel, Git, Jira

EDUCATION & CERTIFICATION

University of Washington, Bothell

Jun 2027

B.A., Business Administration, Management Information Systems (Data Analytics minor) — GPA 3.7

- Dean's List (2024, 2025) · Microsoft Certified: Power BI Data Analyst

LEADERSHIP

ASUWB — Treasurer

2026 – Present

- Steward a \$4M student-activities budget; review and approve organization funding and present financial reports to the student-government board.

Delta Sigma Pi, Upsilon Psi — Chapter President

Apr 2025 – May 2026

- Led an 80+ member business fraternity and 14-person executive team; drove 20% membership growth. Named Upsilon Psi Collegiate Member of the Year (2026).
